IV. Clarifications

1	We believe that on the installed N5200, all (8) onboard FC ports (4 per controller) are currently in use. Please confirm.	Yes, all (8) onboard FC ports (4 per controller) are in use.
2	Please confirm that the intent is to run SnapManager for Oracle in an iSCSI environment.	No; the intent is to run Snapmanager for Oracle in an NFS environment.
3	Is it true that for a vendor to successfully be allowed to quote you the N series, IBM needs to come onsite to make sure the configuration is appropriate?	<p>We checked with our local (Honolulu, Hawaii) IBM representative and were informed that with the applicable model and serial numbers of the N-series equipment to be upgraded, there is no need for a prospective bidder to perform an on-site visit.</p> <p>The N-series storage system to be upgraded is an N5200, Type 2864, Model A20. The base unit is serial</p>

	<p>number 01337. This is item number 68 in the updated tables that are a part of this addendum.</p> <p>The N5200 contains three 2863-001 EXN2000 expansion units with serial numbers 07895, 07894, and 07893.</p> <p>Finally, the N-series storage system contains an item described as an "N5200 642 Function Authorization" with serial number 05870. This is item number 78 in the updated tables that are a part of this addendum</p> <p>We have also separated the original table titled, "Upgrade Existing N5200 (items 56-89)" into two subtables, "Hardware Machines to be Installed" and "Hardware Upgrade MES" to more closely emulate system "configurators" that IBM authorized dealers utilize.</p>
